summer softness

cool comfort

The ultimate in summer sleeping comfort: Alpaca light quilts are filled with 60% Australian grown alpaca and blended with 40% Australian grown pure natural cotton to create an exquisite quilt for summer sleeping comfort.

By combining the unique thermal properties of Australian alpaca fleece with cotton, the Alpaca Light quilt collection is the ultimate indulgence in sleeping pleasure for the warmer months.

Alpaca fleece is naturally resilient to the elements and has a higher tensile strength than wool, making it a natural choice for summer quilts. When blended with cotton, its natural qualities also provide supportive comfort that guarantees sleep satisfaction through innovation for an exceptional sleeping experience.

Alpaca Light quilts are available in super light 250gsm summer weights and a 400gsm version for slightly cooler summer nights, apartment living and for those that love the softness of alpaca quilts.
